

Managerial Accounting 7th Edition by Hartgraves & Morse
Practice Quiz

Chapter 3 - Cost-Volume-Profit Analysis and Planning

1. With fixed costs of \$10,000/month and variable costs of \$2/unit, Blake reported a monthly profit of \$4,000 at a volume of 8,000 units. The unit selling price was:
- a. \$2.00
 - b. \$1.75
 - c. \$3.75
 - d. \$5.75

2. Presented is information from Wanda's contribution income statement:

Sales		\$85,000
Less variable costs:		
Manufacturing	\$30,000	
Selling and administrative	<u>10,000</u>	<u>(40,000)</u>
Contribution margin		45,000
Less fixed costs:		
Manufacturing	12,000	
Selling and administrative	<u>9,000</u>	<u>(21,000)</u>
Profit		<u>\$24,000</u>

With a functional income statement Wanda would have reported a gross margin of:

- a. \$24,000
 - b. \$43,000
 - c. \$66,000
 - d. \$45,000
3. Based on the information in question 2, if Wanda had a \$10,000 increase in sales, profits would increase by:
- a. \$5,789
 - b. \$4,118
 - c. \$5,290
 - d. \$10,000
4. Regal Inc. produces a product sold for \$52 per unit. Variable and fixed cost information is presented below:

Variable costs per unit		Fixed costs per month	
Manufacturing	\$10	Manufacturing	\$33,000
Selling and administrative	<u>2</u>	Selling and administrative	<u>19,000</u>
Total	<u>\$12</u>	Total	<u>\$52,000</u>

The sales volume required for a monthly profit of \$48,000 is:

- a. 1,000 units
- b. 1,923 units
- c. 1,300 units
- d. 2,500 units

5. Based on the information in question 4, with an income tax rate of 40 percent the sales volume required for a monthly after-tax profit of \$48,000 is:

- a. 2,000 units
- b. 3,300 units
- c. 2,538 units
- d. 4,300 units

6. Consider the following profit-volume graph where profits/losses are plotted on the vertical axis and volume is plotted on the horizontal axis.

An increase in fixed costs accompanied by a decrease in variable costs will have the following impact on the total profit or loss line:

- a. Lower the vertical axis intercept and reduce the slope
 - b. Increase the vertical axis intercept and reduce the slope
 - c. Lower the vertical axis intercept and increase the slope
 - d. Increase the vertical axis intercept and increase the slope
7. Alan sells two products: Y has a contribution margin ratio of 0.40 and Z has a contribution margin ratio of 0.60. A shift in the sales mix to more product Y and less product Z will:
- a. Reduce the break-even point and increase the slope of the profit or loss line
 - b. Increase the break-even point and reduce the slope of the profit or loss line
 - c. Increase the break-even point and increase the slope of the profit or loss line
 - d. Increase the vertical axis intercept and reduce the slope of the profit or loss line with no change in the break-even point
8. James company reported the following for November: Sales \$80,000, variable costs \$20,000, and fixed costs \$40,000. If monthly sales increase 20 percent, profits should increase by:
- a. 20 percent
 - b. 40 percent
 - c. 60 percent
 - d. 80 percent
